Lambert's haemosporidian infections in the blood, spleen and liver of grey-crowned tufted, tree and fork-tailed drongos in South Africa. Lambert's Haemosporidian infections have been reported in birds from various genera in most parts of the world. This study is the first to characterise and identify haemosporidians infecting grey-crowned tufted, fork-tailed and tree drongos (*Dicrurus lamberti*, (Hemiprotidae), in South Africa. Biopsies were taken from birds from a private game farm and from the Gauteng province of the Eastern Cape. All hemosporeidians were identified as *Haemoproteus* spp.; all were *Leucocytozoon* spp. infected, but a predominance of *H. sp.* (Mitochondrial DNA marker was used). Considering the host, sex and the number of days post-capture, the prevalence of infection was higher in males than in females. For the host and time category, there was no difference in the parasite prevalence in the three drongos species. The parasite prevalence of the three drongos was higher in the Eastern Cape province than in Gauteng. Showing posts from Wednesday, January 20th, 2014 As Bernie Sanders pulled the plug on his presidential campaign, some Democrats are wondering why they should bother being pro-Israel. By this, I don't mean pro-Israel for short-term political gain — after all, you can only play the game for so long. But at this point, are Democrats pro-Israel because it's the right thing to do, or for lack of a better word, out of "patriotism"? (Okay, just kidding.) The second half of that title is what most people believe Israel was founded as and how it exists today — a homeland for Jews in the Middle East. The first half is more problematic — a homeland for Jews. Leading up to the last few weeks of the Democratic primary, it was clear that Hillary Clinton was going to be the nominee for the Democratic party. The entire thing, to be honest, was very, very boring. She wasn't the best candidate, but she was competent. She was very prepared, knew how to answer questions, and so on. Then, Bernie Sanders burst onto the scene.

## What's New in the Photoshop CC 2018 Version 19?

Q: Why does Docker run slower as RAM gets full? For the website I'm currently working on, I'm using a single Jenkins VM with 4 cores (24gb RAM) and a single (8gb) container server that runs a simple nodejs server. Everything works fine, except that the overall performance is very bad. I thought this was due to the overall memory consumption, so I added more RAM to the machine and now the whole website runs significantly better. Also, in Chrome DevTools I can see the memory usage is stable with only a few hundred megabytes. So it seems the only change in performance was the RAM. Am I missing something? Should it be possible that increasing RAM performance doesn't change the overall performance? Thanks in advance A: Using up resources is expected and to be expected. It's how the OS works. As you increase the RAM the OS will use more RAM and as more processes are started the OS will always allocate more resources. This is normal. What you want to do is to fix the problem. Q: What is the name of the local variable that is initialized to the value of a global variable in a C macro? Inside a C macro, the following code is executed: (TEST) /\* uninitialized local variable \*/ #define TEST \ a = TEST; \ How is the local variable TEST defined? A: It's undefined behavior, because the global variable TEST is left uninitialized. The macro expands to: a = a; and there's no way a = a will yield an initialized value. A New Revenue Stream for IndieMafia - suave ===== suave Hey guys, After this post, I learned a lot about iOS development, especially with Core Data. The performance boost was magnificent. I'm wondering what they would think about an easy way to get that functionality to other people. Let's say you build a game and upload to app store. Do you need to use the actual iOS code, or can you use a vm. I think vm could be even easier if you could limit core
